EXERCISE - PROMISES WITH XML

- https://dummyjson.com/carts/1
- https://dummyjson.com/carts/2

- *Write a function that makes an call to the above APIs and logs the response using XMLHTTPRequest. Use a promise to handle the response.*
- *Now make sequential API calls. Use the response of the first promise and return the total amount to the next.*
- *Now print the sum of the amount of carts.*

EXERCISE -FETCH API

- 'https://restcountries.com/v2/all'

- Read the countries API using fetch and print the name of country, capital, languages and population
- Display all the above data in a table.
- Read the countries API using fetch. Create a button to display Name and Area of the 10 largest countries
- Create another Button to read the countries api and count total number of languages in the world used as officials and display them.
